Solving these equations we eventually find that if iWQ o , $Q(t)$, n , $-(j^?, o, n,)$, $+ IB \cos oS J_x (p) e^{Tm} a^{---5-r} J_o (l + m) (hH + km)$ The directed effect depends on the presence of the terms involving $\cos oS$ in the expressions for Q_z and R_z . Now when $r = \infty$ for the second medium, $h = cc$, and these terms vanish altogether; hence the possibility of directing the energy of the radiation sent out from the bent antenna is due to the imperfect conductivity of the earth. Von Hoerschlemann has given a numerical discussion of the above formulae but the investigation is too long to be inserted here. 28.
